Monarch Steel Framing Designed to stand the test of time

100%
accurate,
complete
& on time

What is Monarch Steel Framing?

Made of high tensile steel from BlueScope Steel, Monarch Steel Framing is engineered to accommodate the unique aspects of the Monarch Building System including roof frame point loads and bracing requirements. Monarch Steel Framing is pre-punched to provide hold down locations, service holes and bolt attachments and is provided as a complete set of ready to install, pre-assembled frames and trusses. It comes with all necessary components, down to the last nut and bolt, allowing quick and easy installation. The 78mm wall frames also have a flush internal surface as a base for quality plasterboard finishes.

Warranty

Monarch Steel Framing for walls is made from TRUECORE® steel which comes with a 50 year warranty from BlueScope Steel.*

All Monarch Steel Framing is guaranteed free of defects from faulty manufacture for a period of 10 years.**

Advantages of Monarch Steel Framing

**Tough,
durable
and high
quality**

Monarch Steel Framing is the result of more than 30 years of ongoing research, development and testing. The combination of proven materials, comprehensive engineering design and customised yet automated manufacturing delivers benefits well beyond those associated with traditional site construction methods.

100% accurate, complete and on time

Manufacturing technology controls quality and ensures our steel framing is millimetre accurate so your house frames fit together first time, every time. Our systems, processes and our people ensure your Monarch Steel Framing arrives onsite with all the components to complete assembly efficiently and productively. We schedule design, manufacturing and logistics to deliver to your build schedule and your deadlines.

Tough, durable and high quality

Monarch Steel Framing complies with all relevant aspects of the Building Code of Australia and has a very high standard of durability:

- **Wind loadings/ bracings:** non Cyclonic Categories N2, N3 and Cyclonic Categories C1, C2.
- **Strength, uniformity and longevity:** the material strength provides strong and higher resistance in extreme conditions. It won't warp, sag, shrink, twist or rot – ever!
- **Termite proof:** steel provides total peace of mind in knowing that the core structure of your buildings cannot be eaten away by termites.
- **Truss spacing up to 2400mm:** provide ample space for the installation of air conditioning duct work.
- **Strong and rigid truss and joist systems:** allow larger open living areas and means minimal deflection which commonly causes cracking in cornices.

- **No additional bracing required:** all bracing is built into the frame so there is no need for any packing out of the frame as is required with conventional framing.
- **Peace of mind:** steel provides no ongoing fuel in the event of fire.

Less impact on the environment

Efficient factory processes minimise waste. Furthermore, not only can steel be recycled but TRUECORE® steel is made with an element of recycled steel.

Making building easier

Monarch Steel Framing is manufactured in accordance with pre-determined engineering parameters to ensure structural compliance, performance and optimised site installation. All components are clearly labelled and loaded into transport racks in a logical sequence and supplied with everything down to the last nut and bolt, making it easier for you. Pre-punched holes provide hold down locations, service holes and bolt attachments so minimal drilling is required. Whether you use our accredited installation teams or your own, unloading is efficient and assembly onsite is seamless and fast.
